

EN ElectronicNetwork invested in a new SMT line

April 2008

EN ElectronicNetwork has invested in a new SMT line at their site in EN Bonn. It is the first in Germany sold, newest machine generation by Fuji NXT II.

The line is being complemented by a new EKRA screen printer X6, which allows an optical paste inspection of up to four pictures per second.

A new reflow oven, Type Vision X of Rehm, completes the line.

Especially the highlights in the rapid set up strategy and the operator convenience lead to the decision to go a new joined way with Fuji and their assembly systems.

The new line will be installed mid June at the new site of EN Bonn in Hersel to meet the increased requirements.

To present the new premises including the new production line to our customers and interested companies there is an information day planned for the first quarter of 2009.
